OPERATIONAL TRANSFORMATION PROPOSAL

SWEAFEX
Operations & Logistics Management Platform

One Connected Platform for Customers, Vendors, Teams, Trips, and Management. Designed around SweafEx's verified operational workflow — digitizing daily execution, eliminating administrative friction, and maximizing operational capacity without altering core business practices.

CORE POSITIONING	TARGET ORGANIZATION	DELIVERY MODEL
Single Source of Operational Truth	Whooosh Networks Pvt Ltd (SweafEx)	5 Phased Production Segments

Prepared For:
Whooosh Networks Pvt Ltd (SweafEx Leadership)

Prepared By: Octagram AI & Software Solutions

CURRENT OPERATIONAL REALITY

"We Started With the Process — Not the Software"

A detailed review of SweafEx's working sheets, departmental handoffs, and communication patterns reveals high operational capability managed through heavy manual coordination.

VERIFIED END-TO-END OPERATIONAL LIFECYCLE

1. Client Enquiry (WA/Calls) → 2. Sales Working Sheet → 3. Placement & Transporters → 4. Trip Tracking (EXP) → 5. Loading & TCN → 6. POD Collection → 7. Accounts (Zoho Books)

1. Disconnected Working Sheets

Siloed Data

Sales, Purchase, Traffic, and Accounts maintain separate Excel workbooks. Information is manually recopied between departmental files.

2. WhatsApp Communication Trap

8+ Chat Groups

Crucial timestamps, driver numbers, vehicle photos, and customer confirmations are scattered across chat threads without a central log.

3. Repeated Manual Data Entry

High Overhead

Vehicle numbers, driver details, tonnage, customer rates, and trip numbers are typed repeatedly across different departmental records.

4. Fragmented Profitability View

Delayed P&L

Customer freight rates sit in Sales sheets while Transporter hire costs sit in Purchase records, delaying real-time gross margin visibility.

5. Manual Coordination Bottlenecks

Phone Calls

Coordinators spend significant working time calling drivers for status, answering customer enquiries, and chasing POD updates.

6. Disconnected Historical Audit

Reconstruction

Reconstructing past vehicle performance, route pricing, or billing disputes requires piecing together emails, chats, and archived sheets.

GUIDING IMPLEMENTATION PRINCIPLE

"WE ARE NOT CHANGING HOW SWEAFEX RUNS ITS BUSINESS. WE ARE STRUCTURING AND SIMPLIFYING THE WAY THE EXISTING WORK GETS DONE."

The platform does not disrupt your operational relationships, negotiation practices, or team hierarchies. Instead, it provides a unified digital operating layer around your current process so employees spend less time searching, copying, and following up — and more time executing freight.

CURRENT WORKING MODEL

Same Business Process managed via fragmented tools: Disconnected Excel files + 8+ WhatsApp chat groups + Phone calls + Physical paperwork + Manual status follow-ups.

PROPOSED DIGITAL OPERATING PLATFORM

Same Business Process powered by connected workspaces: Central Operational Record + Structured Handoffs + One-Time Data Entry + Automated Milestones + Live Management Visibility.

THE MULTIPLIER EFFECT

One-Time Data Entry → Reused Everywhere

Information flows forward automatically through the workflow lifecycle instead of being repeatedly typed by each department.

STAGE 1: SALES
Customer Requirement
Origin, Dest, Vehicle, Rate

→

STAGE 2: CRM
Enquiry (ENQ)
Customer rate, Cargo specs

→

STAGE 3: PURCHASE
Placement Lock
Vendor, Vehicle, Driver, Cost

→

STAGE 4: OPS
Trip (EXP) & TCN
Auto-generated documentation

→

STAGE 5: POD & ACC
POD & Commercials
Margin audit, Document vault

1. Entered Once at Source

Sales Coordinator enters client specs and target rate once into the Enquiry record. No manual forwarding or duplicate logging needed.

2. Inherited by Downstream Teams

Placement team sees the exact job in their queue; Operations receives the assigned vehicle & driver details with zero manual typing.

3. Instant Documents & Master Reports

TCNs pre-fill automatically; Management Master Sheet indexes all customer, vendor, and margin figures in real time.

CONNECTED COLLABORATION

How Information Moves Seamlessly Through SweafEx

Eliminating inter-departmental friction: one team inputs information, and the next team immediately acts upon it.

ORIGINATING TEAM	WHAT THEY ENTER ONCE	RECEIVING DEPARTMENT	WHAT THE SYSTEM AUTOMATES NEXT
Sales Coordinator	Customer enquiry, corridor, vehicle type, target rate, cargo tonnage.	**Purchase / Placement**	Instantly surfaces in Placement queue with matching suitable vendor recommendations.
Purchase / Placement	Transporter selection, hire cost, vehicle number, driver name/phone.	**Operations & Traffic**	Locks placement, generates EXP Trip ID, and pushes job to active trip tracking board.
Operations / Traffic	Loading completed milestone, weight slip, cargo photo.	**Sales Backend & Client**	Auto-generates pre-filled TCN; sends loading advisory to customer via WhatsApp.
Field Driver / Vendor	Transit status, delivery completion, electronic POD photo upload.	**Operations & Accounts**	Alerts Operations for physical POD tracking; makes margin/cost reviewable for Accounts.
All Departments	Continuous operational milestone updates and timestamps.	**Management**	Instantly updates central Master Sheet, live margin reporting, and route profitability.

Core Advantage: Zero manual copy-pasting between spreadsheets, zero phone calls asking "has the vehicle been placed?", and zero misplaced documents.

SYSTEM BLUEPRINT

One Platform. Five Core Operational Layers.

A modular platform providing tailored workspaces for each role while maintaining a unified central database.

LAYER 01
Client CRM
Customer master, enquiry intake, contracted rates, active shipments & communication history.

LAYER 02
Vendor CRM
Transporter profiles, fleet records (RC/Fitness), driver DLs, bank records, and reliability rating.

LAYER 03
Operations
Daily execution: placement queue, EXP trips, 13 milestone progression, and 5-stage POD lifecycle.

LAYER 04
Master View & Analytics
Central Master Sheet, multi-filter search, real-time gross margin visibility, and management KPIs.

LAYER 05
Department Portals
Role-specific views for Sales, Purchase, Traffic, Backend, and Accounts with User Permissions.

Connected External Services

Lightweight automated extensions supporting daily operations:

- **WhatsApp Business API:** Automated milestone alerts, TCN delivery, payment notices.
- **External Verification APIs:** RC validity, Fitness check, Driver DL verification.

Zoho Books Coexistence

Clear architectural boundary:

- **Independent Accounting:** Zoho Books continues handling accounting, billing, and tax reconciliation.
- **Future Integration:** API integration can be evaluated as a separate enhancement later.

HUMAN-CENTERED INTERFACE

Every Screen Follows a 4-Pillar Mental Model

To ensure rapid adoption and minimal training, every workspace is structured around four clear operational pillars.

1. WHAT I SEE

Clean overview of the employee's active queue. Relevant job cards, open enquiries, pending placements, or active milestones.

Example: Open enquiries, client requirements, loading dates, target rates.

2. WHAT I CAN DO

Direct 1-click operational actions. Create an enquiry, compare vendor rates, assign a vehicle, trigger a document, or update status.

Example: Enter quote, confirm order, select transporter, upload POD photo.

3. WHAT SYSTEM DOES

Background automation that removes repetitive work. Pre-fills data, surfaces matching vendors, checks documents, and updates downstream teams.

Example: Generates EXP ID, pre-fills TCN, alerts customer on WhatsApp.

4. WHY THIS HELPS

Less searching, less re-entry, less calling, and faster handoffs — creating more employee capacity for customer service and execution.

Impact: Employees spend less time on administration and more on active business.

Result: Software that feels intuitive on Day 1. Employees don't have to navigate complex multi-level menus to perform daily freight tasks.

WORKSPACE DEEP-DIVE: SALES

Sales Coordinator Workspace — Client Service & Responsiveness

Primary Responsibility: Customer communication, enquiry intake, freight quote negotiations, and order confirmations.

WHAT I SEE

- **New Enquiries:** Inbound client requirements.
- **Pending Quotations:** Quotes awaiting client approval.
- **Active Follow-Ups:** Rate negotiations in progress.
- **Customer 360:** Past rates, active trips, contacts.

WHAT I CAN DO

- **Log Requirement:** Fast enquiry entry form.
- **Review Rate History:** Instant corridor benchmarks.
- **Send Quote:** Prepare and log freight rates.
- **Convert to Order:** 1-click booking confirmation.

WHAT SYSTEM DOES

- **Generates ENQ ID:** Sequential tracking code.
- **Carries Data Forward:** Pre-fills order fields.
- **Routes to Placement:** Alerts purchase team.
- **Preserves History:** Permanent customer rate log.

WHY THIS HELPS

- **No Excel Searching:** Past rates instantly visible.
- **No Retyping:** Data moves forward automatically.
- **Team Continuity:** Colleague can step in easily.
- **More Capacity:** More time for customer relationships.

Throughput Impact: Sales Coordinators spend less time searching old spreadsheets and retyping messages, creating capacity to manage more customer enquiries.

INTERFACE DESIGN

Conceptual UI: Sales Coordinator Dashboard

Conceptual UI — Final screen layout to be refined during workflow design

SWEAFEX OPERATIONS PLATFORM — SALES WORKSPACE

NEW ENQUIRIES	AWAITING CLIENT QUOTE	CONFIRMED ORDERS TODAY	ACTIVE TRIPS IN TRANSIT
12	4	8	26

ENQ #	CUSTOMER	ROUTE	VEHICLE SPEC	TONNAGE	TARGET RATE	STATUS	ACTION
#ENQ-1086	Schneider Electric	BLR → HYD	32ft Multi-Axle	14 MT	₹ 58,000	New Enquiry	Request Placement
#ENQ-1085	Tata Electronics	HSR → MAA	20ft Container	7.5 MT	₹ 32,000	Quote Sent	Follow-Up

WHAT I SEE
Open enquiries, target freight, and client rate context.

WHAT I CAN DO
Log requirement, review past rates, convert to order.

WHAT SYSTEM DOES
Routes order to placement; pre-fills customer preferences.

WHY THIS HELPS
Faster quotes, no manual spreadsheet searching.

CUSTOMER RELATIONSHIP MANAGEMENT

Customer Profile — Centralizing All Client Intelligence

One master record for each customer eliminating scattered contact sheets and forgotten client operational rules.

Customer Master Record

Illustrative — final fields to be confirmed

- **Corporate Master:** Company Name, Legal Entity, Registered Address, PAN & GSTIN.
- **Key Contacts Directory:** Logistics Heads, Plant Dispatchers, Accounts contacts with mobile numbers and emails.
- **Operational Preferences:** Standard loading dock hours, mandatory vehicle specifications, tarping requirements.
- **Commercial Terms:** Agreed credit period, bill submission formats, and document requirements.

Operational History & Corridors

- **Corridor History:** Top lanes executed with frequency, average rate trends, and preferred vehicle types.
- **Active Shipment Feed:** Real-time list of all trucks currently loading, in transit, or unloading for this client.
- **Document Vault:** Client rate contracts, Master Service Agreements (MSAs), and special clearance passes.
- **Communication Log:** Centralized record of key rate agreements and special operational instructions.

Operational Benefit: Any sales coordinator can manage any client account with complete historical context — ensuring smooth business continuity even when the primary coordinator is on leave.

COMMERCIAL VISIBILITY

Quote & Rate Board — Margin Protection Before Booking

Side-by-side comparison of customer requested rate vs transporter market costs to protect gross margins before placement.

Customer Side (Revenue)

- **Customer Target Freight:** Price indicated by client or contracted lane rate.
- **Historical Lane Pricing:** Rates accepted by this client on this corridor over the last 30/60/90 days.
- **Current Quote:** Proposed rate sent to customer awaiting commercial sign-off.
- **Target Gross Margin:** Minimum acceptable profit margin % for this lane.

Vendor Side (Direct Cost)

- **Vendor Market Quotes:** Real-time quotes entered by the Placement team for matching transporters.
- **Previous Transporter Costs:** Lowest and average hire costs achieved on this route historically.
- **Projected Gross Margin:** Immediate calculation: `Customer Rate – Transporter Cost = Gross Profit`.
- **Commercial Lock:** Coordinator secures booking with clear profit margin visibility upfront.

Decision Support: Management and Sales have instant transparency into lane profitability before vehicles are dispatched, avoiding underquoted shipments.

CONFIRMED BOOKINGS

Order Management — From Customer Confirmation to Placement

Once the customer approves the quote, the requirement seamlessly converts to a live confirmed Order.

Order Record Structure

Illustrative — final fields to be confirmed

- **Order ID:** Auto-generated sequential order reference (e.g. `ORD-2026-0842`).
- **Confirmed Rate:** Final freight rate locked for customer invoicing.
- **Loading SLA:** Agreed reporting date, time window, and loading location details.
- **Vehicle Specification:** Exact body type (Container/Open/Trailer), tonnage, and length required.
- **Placement Deadline:** Target time for the Purchase team to allocate a confirmed vehicle.

Order Pipeline Stages

Final stages to be confirmed

- **1. Order Confirmed:** Requirement logged; automatically placed in Purchase queue.
- **2. Vehicle Allocated:** Purchase team has matched and confirmed a transporter.
- **3. Trip Active (EXP):** Vehicle reported at loading dock; converted to live trip.
- **4. Completed:** Trip delivered, POD collected, ready for billing review.

Zero Handoff Friction: Sales Coordinators do not need to walk across the office or send WhatsApp reminders to hand off confirmed orders to Purchase.

WORKSPACE DEEP-DIVE: PURCHASE

Purchase & Placement Workspace — Fast, Reliable Vehicle Sourcing

Primary Responsibility: Sourcing verified vehicles and transporters at competitive hire rates for confirmed customer orders.

WHAT I SEE

- **Placement Queue:** Orders requiring trucks.
- **Order Specs:** Route, tonnage, vehicle type.
- **Matching Transporters:** Lane history & rates.
- **Document Health:** RC, Fitness, DL validity.

WHAT I CAN DO

- **Search Vendors:** Filter by corridor & fleet.
- **Log Vendor Quotes:** Enter negotiated rates.
- **Select Transporter:** Assign vehicle & driver.
- **Lock Placement:** 1-click EXP trip creation.

WHAT SYSTEM DOES

- **Surfaces Vendors:** Ranks matching records.
- **Verifies Compliance:** Checks RC/DL validity.
- **Generates EXP ID:** Official trip reference.
- **Pushes to Traffic:** Updates Operations Board.

WHY THIS HELPS

- **No Chat Scrolling:** Past vendor rates visible.
- **Instant Compliance:** No manual photo checks.
- **Human Authority:** Coordinator decides vendor.
- **Higher Throughput:** Faster placements daily.

Decision Support: The platform surfaces recommendations and verifies documents — the human coordinator retains 100% authority over final vendor selection and rate negotiations.

INTERFACE DESIGN

Conceptual UI: Vehicle Placement & Transporter Matching

Conceptual UI — Final screen layout to be refined during workflow design

SWEAFEX OPERATIONS PLATFORM — VEHICLE PLACEMENT QUEUE

ORDER #ORD-1086 **Schneider Electric** — BLR → HYD (32ft MX, 14 MT) Client Freight: **₹ 58,000** | Loading: **Tomorrow 10:00 AM**

SUITABLE MATCHING TRANSPORTERS (DECISION SUPPORT)

TRANSPORTER	VEHICLE NO	RC / FITNESS	DRIVER	DL STATUS	QUOTED RATE	EXP MARGIN	ACTION
Balaji Roadlines	KA-01-AJ-4920	Valid (2027)	Ramesh Kumar	Verified	₹ 50,000	₹ 8,000 (13.8%)	Select & Lock EXP
Sri Krishna Freight	KA-51-B-8812	Valid (2026)	Sunil Gowda	Verified	₹ 51,500	₹ 6,500 (11.2%)	Select

WHAT I SEE
Open orders, loading deadlines, matching transporters.

WHAT I CAN DO
Compare vendor quotes, verify compliance, lock EXP.

WHAT SYSTEM DOES
Creates EXP trip record; pushes to Traffic queue.

WHY THIS HELPS
Faster placement decisions without WhatsApp searching.

TRANSPORTER NETWORK

Vendor Management — Building a Trusted Fleet Network

Centralized master profiles for transporters, fleet owners, and brokers with complete compliance records.

Transporter Master Profile

Illustrative — final fields to be confirmed

- **Entity Details:** Company Name, Vendor Type (Fleet Owner / Broker / Attached Transporter).
- **Statutory & Banking:** PAN, GSTIN (where applicable), Bank Account, IFSC, and passbook verification copy.
- **Operating Footprint:** Primary lanes operated, fleet size, and standard vehicle categories available.
- **Commercial Terms:** Standard advance/balance terms, payment modes, and detention terms.

Fleet & Performance Intelligence

- **Attached Fleet Roster:** Live list of all trucks registered under this vendor with document health.
- **Driver Directory:** Registered drivers with phone numbers and verified driving licenses.
- **Performance Records:** Historical on-time reporting %, placement cancellation rate, and reliability.
- **Trip History:** Complete historical log of every trip executed for SweafEx with rates paid.

Core Advantage: "Enter vendor information once → reuse it across future placements." Eliminates repeated document collection and manual bank verification.

COMPLIANCE & SAFETY

Vehicle & Driver Profiles — Automated Document Compliance

Individual master records for every truck and driver eliminating last-minute compliance failures at loading docks.

Vehicle Profile & Compliance

- **Registration Data:** Vehicle Reg No, Body Type (Container/Open/Trailer), Length, Gross & Net Tonnage.
- **Document Vault:** Uploaded copies of RC, Insurance Policy, Fitness Certificate, National Permit.
- **Expiry Tracking:** System automatically monitors expiry dates and flags vehicles with expired documents.
- **Verification Check:** Real-time external RC check validates registration status before loading.

Driver Profile & Verification

- **Driver Identity:** Full Name, Primary & Alternate Mobile Numbers, Permanent Address.
- **Driving Licence:** DL Number, License Class (Transport/Hazardous), Expiry Date, and uploaded scan.
- **Verification Check:** External DL check verifies driver licence authenticity against official registry.
- **Active Trip Association:** Shows currently assigned trip to avoid double-allocation of drivers.

Audit Protection: Prevents placing vehicles or drivers with expired fitness or invalid licenses, safeguarding SweafEx and client cargo.

RULE-BASED ASSISTANCE

Suitable Vendor Suggestions & Placement Decision

Assisting placement coordinators with historical lane context while keeping complete human control over final negotiations.

1. Matching Suggestions

The platform evaluates open requirements against historical records:

- **Lane Experience:** Transporters who frequently operate this corridor.
- **Vehicle Suitability:** Exact capacity and body type required.
- **Past Reliability:** On-time placement track record.

2. Coordinator Control

Human coordinator manages the relationship:

- **Negotiate Rate:** Coordinator calls vendor and enters agreed hire rate.
- **Verify Readiness:** Confirms truck availability and location.
- **Select Alternative:** Coordinator can pick any vendor, not just top suggestions.

3. Placement Lock

1–click execution moves the trip forward:

- **Generates EXP ID:** System creates official trip number (e.g. `EXP–2026–4491`).
- **Locks Direct Margin:** Records customer rate vs vendor rate.
- **Handoff to Traffic:** Pushes record to active Operations Board.

Key Principle: The software assists and accelerates — it does not autonomously book vehicles without coordinator approval.

WORKSPACE DEEP-DIVE: OPERATIONS

Operations / Traffic Workspace — Live Trip Execution & Milestones

Primary Responsibility: Monitoring active shipments, managing milestone progressions, handling exceptions, and ensuring delivery.

WHAT I SEE

- **Active Trip Board:** Loading, in transit, unloading.
- **Milestone Status:** Current trip stage & time.
- **Exception Alerts:** Delayed reporting/transit.
- **Direct Contacts:** Driver, vendor, plant dispatch.

WHAT I CAN DO

- **Update Milestones:** 1-tap stage progression.
- **Log Notes:** Detention or route remarks.
- **Attach Photos:** Loading slips, cargo scans.
- **Flag Exceptions:** Escalate delays immediately.

WHAT SYSTEM DOES

- **Central Trip Log:** Links vehicle, driver, EXP.
- **Milestone History:** Timestamped audit trail.
- **Customer Alerts:** WhatsApp status notices.
- **Triggers POD Queue:** Prompts delivery upload.

WHY THIS HELPS

- **Less Phone Calls:** Central status tracking.
- **No Chat Searching:** Single operational record.
- **Fast Exception Action:** Delays highlighted early.
- **Higher Capacity:** Manage more active trips.

Operational Advantage: Centralized status tracking reduces repeated calls, spreadsheet updates, and manual follow-ups, allowing coordinators to spend more time managing exceptions and active shipments.

INTERFACE DESIGN

Conceptual UI: Operations Active Trip Board

Conceptual UI — Final screen layout to be refined during workflow design

SWEAFEX OPERATIONS PLATFORM — ACTIVE TRAFFIC BOARD

Vehicle Reporting	Currently Loading	In Transit	Unloading / Delivered
4	6	18	5

EXP #	CUSTOMER	ROUTE	VEHICLE / DRIVER	CURRENT MILESTONE	LAST UPDATE	STATUS	QUICK ACTION
#EXP-4491	Schneider Electric	BLR → HYD	KA-01-AJ-4920 (Ramesh)	Loading Completed	Today 11:30 AM	On Schedule	Update Milestone
#EXP-4488	Tata Electronics	HSR → MAA	KA-51-B-8812 (Sunil)	In Transit (Chittoor)	Today 09:15 AM	On Schedule	Update Milestone
#EXP-4482	ABB India	PEENYA → PUNE	MH-12-RN-3310 (Vikram)	Reached Destination	Yesterday 06:00 PM	Unloading Delay	Log Exception

WHAT I SEE
Active trips by stage; delays highlighted.

WHAT I CAN DO
1-tap milestone updates, attach dock photos.

WHAT SYSTEM DOES
Timestamps milestones; notifies customer.

WHY THIS HELPS
Less status calls; clear trip progression.

CENTRAL RECORD

Trip Detail Screen: One Trip. One Complete Record.

Conceptual UI — Final screen layout to be refined during workflow design

SWEAFEX OPERATIONS PLATFORM — TRIP RECORD: #EXP-4491

1. Overview | 2. Commercials | 3. Milestones (13) | 4. Documents (TCN/POD) | 5. Notes & Updates | 6. Audit Trail

CUSTOMER & ROUTE
Schneider Electric
Bangalore Plant → Hyderabad DC
Cargo: Electrical Panels (14 MT)

TRANSPORTER & FLEET
Balaji Roadlines
Truck: KA-01-AJ-4920 (32ft MX)
Driver: Ramesh Kumar (+91 98801-XXXXX)

COMMERCIAL OVERVIEW

Client Freight:	₹58,000
Vendor Cost:	₹50,000
Gross Margin:	₹8,000 (13.8%)

Single Source of Operational Truth: Anyone with authorized access can understand the exact status, documents, and commercials of any shipment in seconds without reconstructing it from Excel files and WhatsApp messages.

MILESTONE MANAGEMENT

Trip Status & Milestones — Standardized 13-Stage Progression

Clear operational visibility without relying on expensive hardware; tracking verified milestones from dock to delivery.

PHASE 1: PLACEMENT

- M1 — Requirement Confirmed
- M2 — Vendor & Vehicle Allocated
- M3 — Driver Dispatched to Plant

PHASE 2: LOADING

- M4 — Reached Loading Point
- M5 — Loading Started
- M6 — Loading Done & Weighed
- M7 — TCN Generated & Dispatched

PHASE 3: TRANSIT

- M8 — In Transit (Checkpoints)
- M9 — Reached Destination

PHASE 4: DELIVERY & POD

- M10 — Unloading Started
- M11 — Delivery Completed
- M12 — Soft POD Uploaded
- M13 — Physical POD Verified

Transparent Timeline: Every milestone logs the exact timestamp and responsible user (Coordinator or Driver Mobile Web), creating an indisputable operational audit trail.

WORKSPACE DEEP-DIVE: BACKEND

Sales Backend & Document Center — Frictionless Administration

Primary Responsibility: Documentation generation, customer notifications, shared WhatsApp communication, and record management.

WHAT I SEE

- **Document Queue:** TCNs awaiting dispatch.
- **Communication Queue:** Loading notices.
- **Shared Chat Log:** Client & driver messages.
- **Document Vault:** Searchable RCs, DLs, PODs.

WHAT I CAN DO

- **Review TCN:** Verify pre-filled fields.
- **1-Click Send:** Dispatch WhatsApp templates.
- **Upload Files:** Attach signed physical copies.
- **Track Missing Docs:** Monitor pending files.

WHAT SYSTEM DOES

- **Pre-Fills TCN:** Uses trip, truck, cargo data.
- **Links to Trip ID:** Auto-indexes files.
- **Standardizes Formats:** Consistent branding.
- **Logs Communication:** Keeps message history.

WHY THIS HELPS

- **No Retyping:** Pre-filled documents.
- **Fast Dispatch:** 1-click sharing.
- **No Lost Scans:** Central cloud vault.
- **More Capacity:** Handle more documentation.

Throughput Impact: Documentation and customer notifications are prepared and dispatched in a fraction of the time without manual copy-pasting.

AUTOMATED DOCUMENTATION

TCN Generation — Created Once, Reused Everywhere

Because customer, vehicle, driver, route, and cargo data already exist in the platform, TCN generation is automated.

STEP 1: DATA EXISTS
Trip Record (EXP)
Client, Truck, Driver, Cargo

→

STEP 2: AUTO-FILL
System Pre-Fills TCN
Zero manual data entry

→

STEP 3: REVIEW & SEND
1-Click WhatsApp Share
PDF sent to client / vendor

→

STEP 4: VAULT ARCHIVE
Signed Copy Attached
Indexed in Trip & Client record

What the Pre-Filled TCN Contains

- **Header:** SweafEx official branding, sequential TCN Number, Date & Time.
- **Consignor & Consignee:** Full company names, GSTIN, origin dock & destination address.
- **Fleet Particulars:** Vehicle Registration Number, Body Type, Driver Name & DL Number.
- **Cargo Details:** Description of Goods, Number of Packages, Gross/Tare/Net Weight.

Operational Benefits

- **Eliminates Typographical Errors:** Driver names and truck numbers match official records exactly.
- **Instant Dispatch:** TCN generated the second loading is completed; driver receives copy on mobile.
- **Permanent Retrieval:** Any past TCN can be downloaded in seconds during customer audits or billing reviews.

CASHFLOW PROTECTION

POD Management — 5-Stage Lifecycle from Delivery to Billing

Accelerating Proof of Delivery collection to eliminate billing delays and speed up customer receivables.

STAGE 1
POD Pending
Cargo unloaded; awaiting driver signature.

STAGE 2
Soft Copy Recd
Driver uploads photo via mobile web link.

STAGE 3
Hard Copy Transit
Courier tracking number attached.

STAGE 4
Hard Copy Verified
Original physically received & filed.

STAGE 5
Submitted / Billed
Submitted to client with invoice.

Management POD Filters

- **Overdue POD Alerts:** Highlight shipments delivered with pending soft copy.
- **Customer-Wise POD Queue:** Group pending PODs by client to streamline invoice preparation.
- **Transporter Hold List:** Track vendor payments linked to outstanding original physical PODs.

Operational Value

- **Eliminates Lost Documents:** Digital soft copy stored permanently from Day 1.
- **Shortens Billing Cycle:** Invoices can be generated immediately using soft POD where approved.
- **Dispute Resolution:** Clear timestamps and legible scans resolve delivery discrepancies quickly.

WORKSPACE DEEP-DIVE: COMMERCIALS

Accounts / Commercial Workspace — Operational Cost & Billing Queue

Primary Responsibility: Reviewing trip commercials, verifying hire costs & customer rates, and checking POD readiness.

WHAT I SEE

- **Commercial Queue:** Trips ready for review.
- **Locked Rates:** Client rate vs vendor cost.
- **Margin Audit:** Trip gross margin %.
- **POD Status:** Soft / hard copy verification.

WHAT I CAN DO

- **Verify Costs:** Review extra detentions/tolls.
- **Approve for Billing:** Mark trip ready for invoice.
- **Approve Vendor Pay:** Verify balance release.
- **Export Records:** 1-click clean data export.

WHAT SYSTEM DOES

- **Consolidates Costs:** No multi-person calls.
- **Links POD Scans:** Attached directly to record.
- **Tracks Advances:** Prevents overpayment.
- **Prepares Export:** Formatted for Zoho Books.

WHY THIS HELPS

- **No Chasing People:** All figures in one place.
- **Protected Margins:** Clear profit audit.
- **Faster Billing:** Verified PODs ready.
- **Zoho Coexistence:** Smooth external accounting.

Clear Boundary: The platform provides operational and margin clarity to Accounts without replacing or interfering with Zoho Books, which remains SweafEx's existing accounting system.

ENTERPRISE SEARCH

Conceptual UI: Management Master Sheet — Universal Search

Conceptual UI — Final screen layout to be refined during workflow design

SWEAFEX OPERATIONS PLATFORM — MANAGEMENT MASTER VIEW

Filter: Month = Oct 2026 | Route = BLR to HYD

14 Records

Export to Excel

EXP #	DATE	CUSTOMER	ROUTE	VENDOR	VEHICLE NO	CLIENT RATE	VENDOR COST	MARGIN %	STATUS	POD
#EXP-4491	05-Oct	Schneider Electric	BLR → HYD	Balaji Roadlines	KA-01-AJ-4920	₹ 58,000	₹ 50,000	13.8%	Loading Done	Pending
#EXP-4475	02-Oct	Schneider Electric	BLR → HYD	Sri Krishna Freight	KA-51-B-8812	₹ 60,000	₹ 51,000	15.0%	Delivered	Soft Recd
#EXP-4450	28-Sep	Schneider Electric	BLR → HYD	VRL Attached	KA-04-E-1982	₹ 57,500	₹ 49,500	13.9%	Delivered	Hard Copy

WHAT I SEE
Every trip across the enterprise with live commercials.

WHAT I CAN DO
Filter by client, route, margin %, vehicle; 1-click export.

WHAT SYSTEM DOES
Consolidates data automatically from daily operations.

WHY THIS HELPS
No more asking multiple teams for operational status.

EXECUTIVE OVERVIEW

Management Dashboard — Real-Time Visibility Without Status Calls

Live key performance indicators across operations, profitability, vendor performance, and billing turnaround.

ACTIVE TRIPS TODAY	AVERAGE GROSS MARGIN	PENDING PLACEMENTS	PODS AWAITING HARD COPY
38	13.4%	6	14
Live tracking active	Protected via pre-booking audit	For loading tomorrow	Soft copies already verified

Commercial & Route Profitability

- **Corridor Performance:** Identify highest-margin vs lowest-margin freight lanes.
- **Customer Profitability:** View net revenue and gross contribution by client account.
- **Vendor Cost Trends:** Track market hire rate fluctuations across seasonal corridors.

Operational Health & Team Performance

- **Placement Speed:** Track turnaround time from customer order to vehicle allocation.
- **On-Time Delivery Rate:** Track reliability percentages across transporters and routes.
- **POD Aging:** Monitor days taken from delivery to physical POD receipt.

ZERO-INSTALL CLIENT PORTAL

Customer Web Portal — Transparent Shipment Tracking

A secure, lightweight mobile-first web portal for clients to track active shipments without installing any mobile application.

What the Customer Sees

- **Active Shipments Feed:** List of all trucks booked, loading, or in transit with real-time status.
- **Milestone Progression:** Clear visual timeline: Placement Confirmed → Loading → In Transit → Delivered.
- **Vehicle & Driver Details:** Assigned vehicle registration number, driver name, and contact number.
- **Digital Document Download:** 1-click download of verified TCNs and electronic Proof of Delivery copies.

Access Model & Business Value

- **Zero App Installation:** Secure access link sent via WhatsApp; opens instantly in any mobile or desktop browser.
- **Strict Data Isolation:** Customer can only view their own company's shipments and approved documents.
- **Reduces Status Enquiries:** Clients check their own delivery status instead of calling sales coordinators.
- **Premium Brand Perception:** Positions SweafEx as a modern, technology-driven logistics partner.

Client Experience: Professional, effortless tracking that strengthens customer retention and eliminates routine status enquiries.

ZERO-INSTALL DRIVER INTERFACE

Vendor / Driver Mobile Web Portal — 1-Tap Updates from the Field

Simple mobile web interface designed for field drivers and transporters: "Minimum interaction. Maximum operational usefulness."

Driver Mobile Actions

- **View Job Particulars:** Origin plant address, contact person phone number, destination dock, and cargo instructions.
- **1-Tap Milestone Updates:** Large, easy buttons: "Reached Loading Dock", "Loading Done", "Reached Destination", "Unloading Completed".
- **Photo Capture:** Capture dock weighbridge slips, cargo photos, and physical POD signatures directly from the phone camera.
- **No Internal Access:** Driver sees only their specific assigned trip; no access to internal rates or customer files.

Technical & Operational Advantages

- **No Play Store Download:** Drivers frequently resist installing heavy apps; mobile web links open immediately.
- **Works on Any Smartphone:** Minimal bandwidth consumption; functions reliably even on standard mobile networks.
- **Real-Time Timestamping:** Automatically captures exact time of driver updates, eliminating manual status chasing.

High Field Adoption: A frictionless mobile web link ensures drivers actually upload photos and report milestones without operational resistance.

CENTRAL REPOSITORY

Document Management — Organized by Entity & Trip

Documents stay with the operational record instead of getting lost inside WhatsApp conversations and individual folders.

CUSTOMER VAULT

- Rate Contracts & MSAs
- GSTIN Certificates
- Special Dock Passes
- Customer Billing Rules

VENDOR VAULT

- PAN & GST Copies
- Bank Passbook / Cheques
- Transporter Agreements
- Performance Logs

VEHICLE & DRIVER

- RC Registration Scans
- Insurance & Fitness
- Driver DL Verification
- Expiry Date Tracking

TRIP / EXP VAULT

- Generated TCNs
- Weighbridge Slips
- Soft & Hard POD Scans
- E-Way Bills & Invoices

Core Impact: Upload, preview, download, and search any document in seconds — linked permanently to the customer, transporter, vehicle, and trip.

COMPLETE SHIPMENT COMPARISON

A Day in the Life — Before vs After

Comparing the end-to-end journey of a single freight shipment through the company.

TODAY: FRAGMENTED WORKFLOW (12 MANUAL STEPS)

1. **Intake:** Customer sends requirement on WhatsApp / calls.
2. **Rate Search:** Sales searches old Excel sheets for past rates.
3. **Re-entry:** Sales copies requirement into Purchase WA group.
4. **Sourcing:** Placement coordinator calls multiple vendors.
5. **Document Check:** Transporter sends RC/DL photos on WhatsApp.
6. **Re-entry:** Vehicle & driver details typed into working Excel.
7. **Arrival Calls:** Traffic calls driver repeatedly for plant arrival.
8. **TCN Typing:** Backend manually types Word TCN from scratch.
9. **Transit Calls:** Traffic calls driver 3–4 times daily for status.
10. **POD on Chat:** Blurry POD photo sent into WhatsApp group.
11. **Cost Collection:** Accounts asks multiple coordinators for costs.
12. **Management:** Asking teams for manual status compilation.

WITH SWEAFEX PLATFORM: CONNECTED WORKFLOW (ENTER ONCE)

1. **Requirement:** Sales logs ENQ once; past rates auto-surface.
2. **Placement:** Matching transporters suggested; RC/DL checked.
3. **EXP Lock:** 1-click EXP created; target profit margin locked.
4. **Traffic Queue:** Trip appears on Operations Board automatically.
5. **TCN Auto-Filled:** Pre-filled from trip record; 1-click dispatch.
6. **Milestones:** Driver & Traffic log 13 stages with 1 tap.
7. **Client Alerts:** Automated WhatsApp milestone notices.
8. **Digital POD:** Soft copy uploaded via mobile web; indexed.
9. **Commercials:** Locked rates & margin ready for Accounts review.
10. **Master View:** Complete record visible to Management live.

"THE WORK DOESN'T DISAPPEAR — THE REPEATED WORK AROUND IT DOES."

The people, responsibilities and operational decisions remain with SweafEx. The platform removes repeated data entry, information searching, manual handoffs and status chasing around those activities.

ELIMINATION OF ADMINISTRATIVE OVERHEAD

What Each Team No Longer Has To Do

Clear operational relief delivered across every functional role in SweafEx.

Sales Coordinator

- **No longer** search multiple Excel files for customer history.
- **No longer** retype requirements into WhatsApp groups.
- **No longer** call Operations repeatedly for shipment updates.

Purchase / Placement

- **No longer** maintain separate vendor info across chats.
- **No longer** manually verify RC/DL validity from photo scans.
- **No longer** re-enter vehicle specs into Excel sheets.

Operations / Traffic

- **No longer** depend on multiple WhatsApp groups for status.
- **No longer** call drivers repeatedly just for routine updates.
- **No longer** manually compile daily tracking sheets.

Sales Backend

- **No longer** repeatedly type truck/driver info into documents.
- **No longer** chase missing POD files across chat threads.
- **No longer** manually create Word/Excel TCNs from scratch.

Accounts & Finance

- **No longer** request trip costs from multiple coordinators.
- **No longer** reconstruct profit margins from scattered files.
- **No longer** delay billing due to unindexed POD copies.

Management

- **No longer** depend on manual status compilation.
- **No longer** ask multiple coordinators for margin figures.
- **No longer** search across workbooks to find historical trips.

Guiding Principle: Every department keeps its core responsibility. The platform removes the unnecessary administrative work around that responsibility.

OPERATIONAL CAPACITY

Expected Operational Benefits by Department

Clear, qualitative improvements delivered to every functional team across SweafEx.

DEPARTMENT	CURRENT ADMINISTRATIVE OVERHEAD	DIGITAL WORKFLOW SOLUTION	EXPECTED OPERATIONAL BENEFIT
Sales Team	Searching old rates across files; repeated data entry.	Customer 360 + 1-click enquiry-to-order flow.	More time for customer communication
Purchase / Placement	Searching vendor lists; manual document photo checks.	Vendor Master + placement queue & verification checks.	Faster placement decisions
Operations / Traffic	Status calls to drivers; spreadsheet tracking updates.	Central trip board + mobile web milestone updates.	More time for exception management
Sales Backend	Repeated document typing into Word/Excel templates.	Auto-filled TCN generation + central document vault.	Less repetitive documentation work
Accounts & Finance	Collecting cost data from multiple coordinators.	Central commercial review queue + locked margin audit.	Faster commercial review & billing readiness
Management	Asking multiple teams for operational updates.	Master View + live executive KPI dashboards.	Faster decision-making & enterprise visibility

The Capacity Multiplier: By converting administrative overhead into active working time, the same team can comfortably handle higher business volume.

SMOOTH TRANSITION

Designed for Adoption — Not Disruption

Six core implementation principles to ensure SweafEx employees embrace the platform from Day 1.

1. Keep Existing Roles

Sales, Purchase, Traffic, and Accounts continue performing their established responsibilities without organizational disruption.

2. Enter Once, Reuse Everywhere

Eliminating duplicate typing makes employees' daily work noticeably easier within the very first week of deployment.

3. Preserve Familiar Sequence

The software follows SweafEx's exact proven sequence: Enquiry → Placement → EXP → Milestones → POD.

4. Retain Human Control

The platform assists with rate history and matching, but SweafEx coordinators retain 100% control over pricing and placement.

5. Gradual Automation Rollout

Automate repetitive administrative tasks first (TCN pre-fill, WhatsApp alerts) before introducing advanced analytics.

6. Staged 5-Segment Delivery

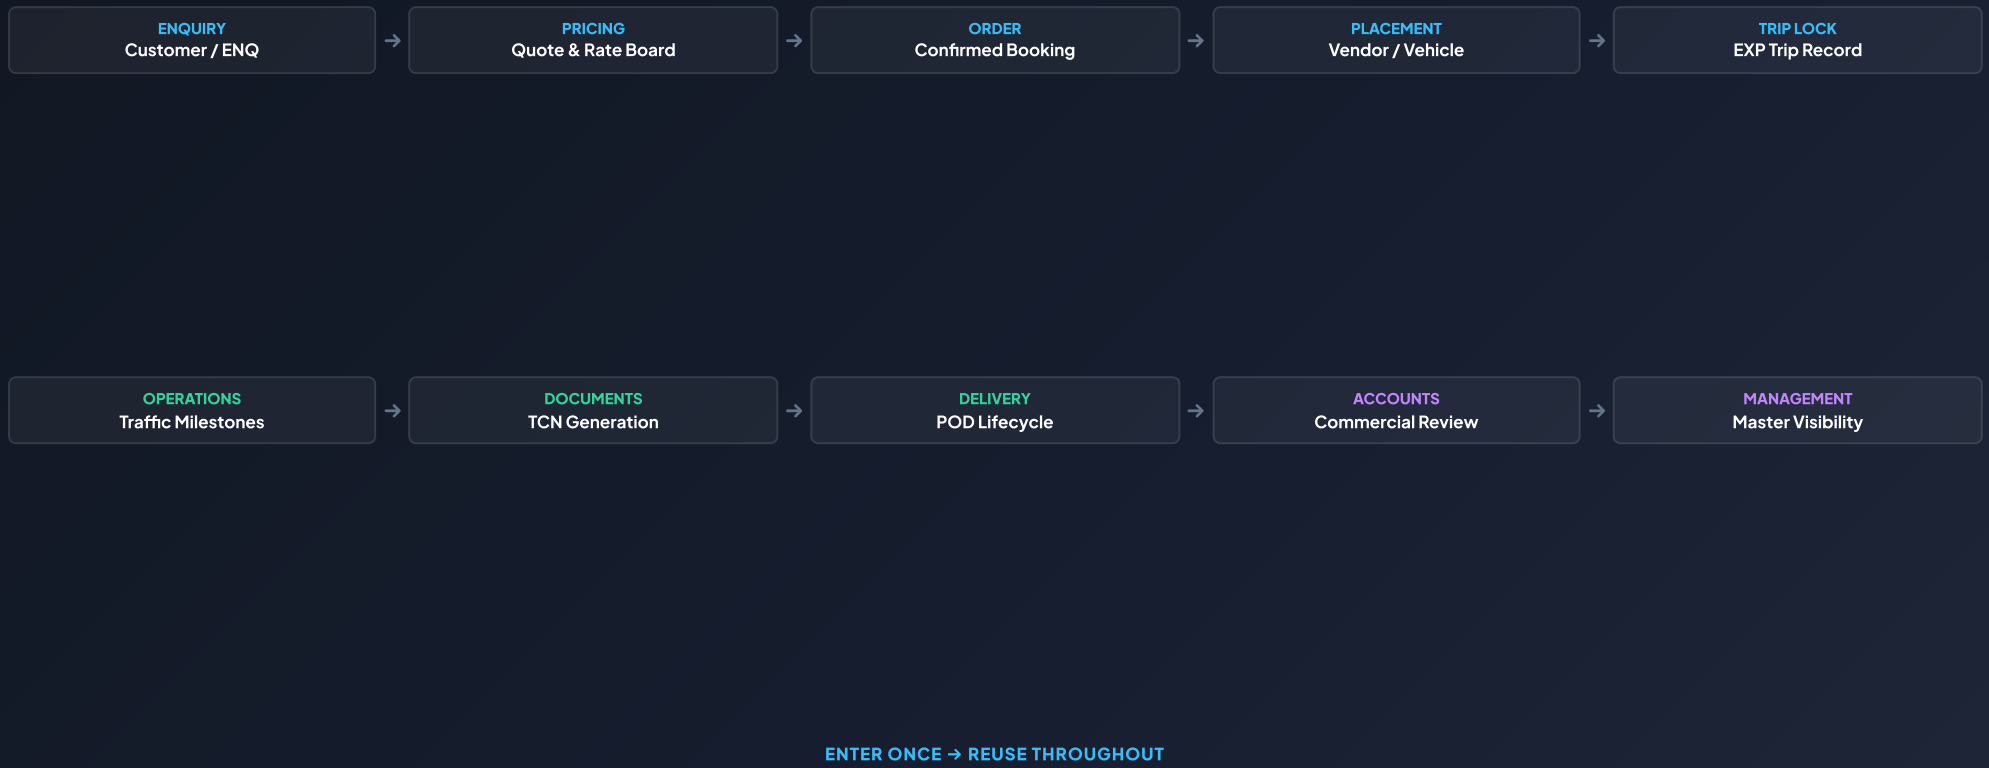

Each module is demonstrated, tested, and validated by SweafEx staff in weekly cycles before moving to the next segment.

Zero Risk Approach: We build the software around SweafEx's working culture — rather than forcing SweafEx to adapt to rigid generic software.

UNIFIED OPERATIONS

End-to-End Workflow: One Connected Journey

Visually demonstrating that the platform is a unified, continuous workflow rather than a collection of disconnected tools.

Core Takeaway: Information captured at the start of a shipment travels seamlessly to the final billing review — eliminating handoff delays and duplicate typing.

STRATEGIC PLATFORM CHOICE

Which Platform Model Is Right for SweafEx?

"The right technology is not the one with the most features — it is the one that fits how SweafEx employees, customers, vendors and drivers actually work."

1. INFORMATION — Public Facing

Traditional Website

PURPOSE & USAGE:

Marketing, company profile, services overview, client inquiries, and public brand presence.

KEY ADVANTAGES:

- Lowest development complexity
- Fast to launch & low maintenance
- Zero installation on any browser

OPERATIONAL LIMITS:

- Not built for complex internal workflows
- Cannot handle live trip & rate data
- No role-based operations access

Best Suited For: **Public SweafEx Website**

NOT SUITABLE AS CORE OPERATIONS PLATFORM

2. OPERATIONS BACKBONE — Recommended

Web Application

USERS & CONCEPT:

Secure portal (`crm.sweafex.com`) for Management, Sales, Purchase, Traffic, Backend & Accounts.

KEY ADVANTAGES:

- Works on Desktop, Laptop & Tablet
- Centralized single codebase & instant updates
- Role-based access & WhatsApp integration
- Accessible from office, hub or home

CONSIDERATIONS:

- Requires active internet connection
- Browser UI (not installed OS binary)

Best Suited For: **All Internal Teams**

CORE SWEAFEX OPERATIONS PLATFORM

3. ZERO-FRICTION FIELD UI — Recommended

Mobile Web Portal

USERS & PURPOSE:

Smartphone interface for Drivers, Transporters & Clients: *"Minimum interaction. Maximum usefulness."*

KEY ADVANTAGES:

- No App Store / Play Store download
- Opens via 1-click secure WhatsApp token
- Zero driver adoption friction
- Camera photo POD & 1-tap milestones

CONSIDERATIONS:

- Browser-dependent performance
- Limited background telematics

Best Suited For: **Drivers, Vendors & Clients**

IDEAL FOR EXTERNAL STAKEHOLDERS

4. INSTALLED APP — Phase 2 Option

Native Android / iOS App

PURPOSE & CONCEPT:

Dedicated binary installed from Google Play / Apple App Store for heavy, daily field workflows.

KEY ADVANTAGES:

- Deep device integration (continuous GPS, sensors)
- Strongest offline-first local caching
- High-frequency field usage optimization

DISADVANTAGES & FRICTION:

- Substantially higher dev & maintenance cost
- App Store approvals & version fragmentation
- 3rd-party drivers resist installing apps

Best Suited For: **Future Dedicated Fleet**

EVALUATE WHEN FIELD NEED JUSTIFIES IT

Strategic Alignment: Native apps are powerful, but their extra cost and release overhead are justified only when deep device telematics is needed. For SweafEx's core logistics operations, **Web Application + Mobile Web Portals** provide the highest operational utility with zero adoption barriers.

OPERATIONAL ECONOMICS & FRICTION ANALYSIS

Development, Maintenance & User Adoption Comparison

Evaluating total cost of ownership, deployment pipelines, adoption friction, and device capabilities across platform models.

Relative Development & Maintenance Investment Scale

PLATFORM OPTION	DEV EFFORT	ONGOING MAINT	TIMELINE	SWEAFEX ROLE
Traditional Website	● (Low)	● (Low)	Fast	Public Info Only
Web Application	●●● (Med-High)	●● (Medium)	Core Scope	Internal Backbone
Mobile Web Portal	●● (Low-Med)	● (Low)	Rapid Add-on	Drivers & Clients
Native Android App	●●● (High)	●● (Medium)	High	Phase 2 Option
Native iOS App	●●● (High)	●● (Medium)	High	Phase 2 Option
Native Android + iOS	●●●● (Very High)	●●● (High)	Very High	Future Fleet

Why Native Mobile Apps Cost Significantly More:

- **Web Platform: 1 Central Codebase → Browser → All Devices**
  One deployment pipeline, instant server updates, zero store approvals, unified bug fixes.
- **Native Apps: Android (Play Store) + iOS (App Store)**
  Separate OS testing, mandatory store reviews, breaking OS updates, backward compatibility overhead.

** Illustrative comparison only. Development and maintenance costs vary based on final scope, integrations, security requirements, and device capabilities. Final pricing governed by agreed project scope.*

Device Capability & User Adoption Friction Matrix

FEATURE / CAPABILITY	WEBSITE	WEB APP	MOBILE WEB	NATIVE APP
Desktop / Laptop Interface	✓	✓	△	✕
Tablet & Smartphone Access	✓	✓	✓	✓
Camera / POD Photo Capture	△	✓	✓	✓✓
GPS / Milestone Location Logging	△	✓	✓	✓✓
Push / WhatsApp Notifications	△	✓	✓ (WhatsApp)	✓✓
Offline-First Telematics	✕	△	△	✓✓
Zero Installation Required	✓	✓	✓	✕ (Store DL)
Instant Centralized Updates	✓	✓	✓	△ (App Store)
User Adoption Friction	**None**	**Low (Login)**	**Lowest (Link)**	**High Friction**

Why Adoption Friction Matters for SweafEx: SweafEx works with dozens of market transporters and third-party drivers. A 1-click WhatsApp link delivers immediate field compliance, whereas requiring drivers to download an app leads to operational pushback.

Legend: ✓ Strong • △ Possible / Implementation Dependent • ✓✓ Deepest Hardware Integration • ✕ Not Applicable

The Practical Choice: Modern browsers support camera capture and GPS timestamps natively. Web Application + Mobile Web Portals deliver 95% of needed field capabilities without the high cost or app-store friction of native apps.

STRATEGIC ARCHITECTURE RECOMMENDATION

Recommended Architecture: Web Application + Mobile Web Portals

"The highest-value investment is not building the most complex interface — it is building the simplest interface that employees, customers, vendors and drivers will actually use."

SWEAFEX OPERATIONS PLATFORM • SINGLE SOURCE OF OPERATIONAL TRUTH

PRIMARY CORE: RESPONSIVE WEB APPLICATION

Internal Teams

Secure Browser Access (`ops.sweafex.com`) • Desktop, Laptop & Tablet

- Sales Coordinator & Rate Board
- Traffic & Active Trip Execution
- Purchase & Transporter Placement
- Sales Backend (Auto TCN & POD)
- Accounts Review & Cost Queue
- Management Master Visibility View

LIGHTWEIGHT: MOBILE WEB PORTALS

External Stakeholders

Zero-Installation Mobile Web • 1-Click Secure WhatsApp Tokenized Links

- **Drivers:** 1-Tap Milestone Updates ("At Dock", "Loaded", "Delivered") & Photo POD Upload
- **Transporters:** Vehicle Placement Assignment, Driver Tagging & Rate Acceptance
- **Customers:** Real-time Live Tracking Link & Instant TCN/POD Document Downloads

FUTURE PHASE 2 EVALUATION: Native Mobile App (Android / iOS) — To be evaluated only after real operational data demonstrates a strong business case (e.g. dedicated captive fleet telematics). Phase 2 Option

1. ZERO ADOPTION FRICTION

Third-party drivers and busy client managers resist installing heavy apps from stores.

- Opens via 1-click WhatsApp link
- No Play Store / App Store logins
- 100% Day-1 field participation

Highest External Compliance

2. RAPID TIME TO VALUE

Focuses 100% of engineering budget on SweafEx's core logistics workflows.

- Automated TCNs & POD tracking
- Transporter placement & rate control
- No app store certification delays

5-Segment Agile Delivery

3. ZERO-MAINTENANCE CLOUD

One centralized codebase means immediate bug fixes and new feature rollouts.

- Instant server-side updates
- Zero user version fragmentation
- No mobile OS compatibility breaks

Unified Single Codebase

4. PRUDENT CAPITAL ALLOCATION

Invest where it directly enhances operational throughput and margin control.

- Deploy Web + Mobile Web first
- Measure real field adoption data
- Add native apps only if ROI justifies

Data-Driven Expansion

The Executive Takeaway: *"Why spend more on an application users may not need?"* For SweafEx's business model, starting with Web Application + Mobile Web Portals provides the highest functionality, lowest risk, fastest delivery, and greatest operational adoption.

DELIVERY FRAMEWORK

Five Segments. Five Clear Demonstration Milestones.

Structured sequential delivery ensuring continuous stakeholder review, zero project risk, and validated working software at every stage.

SEGMENT 1

Foundation & CRM

Customer Master, Transporter Master, Document Repository, Enquiry intake flow, initial Master Sheet framework.

SEGMENT 2

Operations & Trips

Placement workspace, EXP trip generation, 13 operational milestones, initial POD status tracking, margin logging.

SEGMENT 3

Automation & APIs

WhatsApp Business API integration, vehicle RC & driver DL verification APIs, 30-day document expiry alerts.

SEGMENT 4

Portals & Analytics

Customer tracking portal, driver mobile portal, universal Master Sheet multi-filter search, executive dashboards.

SEGMENT 5

UAT & Go-Live

Historical data migration, data validation, final dashboards, comprehensive UAT, staff training, production rollout & hypercare.

Progressive Validation: At the conclusion of each segment, Octagram delivers a live working demonstration for SweafEx management review and sign-off.

COMMERCIAL STRUCTURE

Milestone-Linked Commercial & Payment Schedule

Transparent investment schedule tied strictly to the verification and completion of tangible development deliverables.

Platform Development Fee Schedule

MILESTONE STAGE	DELIVERABLE SCOPE	SHARE (%)	AMOUNT (INR)
Advance	Project Initiation & Mobilization	20%	₹ _____
Milestone 1	Segment 1: Foundation & CRM	16%	₹ _____
Milestone 2	Segment 2: Operations & Trips	16%	₹ _____
Milestone 3	Segment 3: Automation & APIs	16%	₹ _____
Milestone 4	Segment 4: Portals & Analytics	16%	₹ _____
Milestone 5	Segment 5: UAT & Production Launch	16%	₹ _____
TOTAL PLATFORM INVESTMENT		100%	₹ _____

Third-Party Service Passthroughs

To be confirmed

External services billed at actual usage costs directly from providers:

SERVICE	BILLING MODEL	STATUS
WhatsApp Business API	Per conversation / message session	At Actuals
Vehicle RC Verification	Per lookup transaction	At Actuals
Driver DL Verification	Per lookup transaction	At Actuals
Cloud Hosting & Storage	Monthly infrastructure hosting	Direct Passthrough

Commercial Alignment: Payment milestones are released only after SweafEx has reviewed and approved each working segment demonstration.

NEXT STEPS

Final Scope Alignment & Project Mobilization

Key discussion points to align during our final scope workshop to commence Segment 1 development.

Scope Alignment Checklist

- 1. Confirm mandatory fields for Customer & Transporter Masters.
- 2. Confirm initial 13 operational milestone stages.
- 3. Finalize WhatsApp notification triggers and template formats.
- 4. Review external verification API options for RC and DL checks.
- 5. Finalize user roles and departmental access permissions.

Collaborative Working Model

Octagram deploys a dedicated engineering squad (Solution Architect, Full-Stack Engineers, UI/UX Designer, QA Specialist) collaborating with SweafEx process champions in weekly sprint demonstrations.

"Built around how SweafEx actually works — making daily freight execution faster, clearer, and ready to scale."

We look forward to partnering with SweafEx / Whooosh Networks Pvt Ltd to build your enterprise digital operating backbone.
